### **Sampling and Weighting Methodology for the 2023 Texas Lyceyn Poll**

From January 6-12, 2023, The Texas Lyceum conducted a 1000-person telephone survey of adult citizens from the state of Texas. The survey utilized a stratified probability sample design, with respondents being randomly selected at the level of the household and questioned by live interviewers. The survey also employed a randomized cell phone supplement, with 60 percent of completed telephone interviews being conducted among cell phone only or cell phone dominant households. A Spanish-language instrument was developed, and bilingual interviewers offered respondents a chance to participate in English or Spanish. On average, respondents completed the interview in 12 minutes. To ensure an appropriate sub-sample of unregistered citizens, a supplement of 200 interviews among Texas adults confirmed as unregistered was completed online. This yielded a total statewide sample of 1,211 adults, 915 of whom are registered voters according to self-reports. The final data set is weighted to the joint distribution of race/ethnicity, age and gender to achieve representativeness as defined by the Texas Department State Health Services 2022 population projections. The overall margin of error for the poll is +/- 2.82 percentage points, with a larger margin of error for sub-samples.
